						I know that many storm drains were at least		
						partially clogged with sediment. I don't think that		
						chain link fences or even wood fences would		
						significantly stop water from going down an alley,		
						especially if the storm drain waiting there in the		
						alley had had the capacity to drain the water. It		
						seems to me that foliage bordering an alley with a		
						storm drain in it would not impede the water, but		
						instead act as a filter for trash and debris to some		
						extent. I don't understand the allegation I have		
						heard leveled that foliage would have impeded water flow to the drains - guess I need photos to		
						'get' it. I also know that the person 2 houses to		
						the south of me, on Bannock, appears to have		
						recently paved the entire back yard. Our back		
						yards are of some significant size, which was why		
			I recently distributed flyers for an event,			I was interested in living here. So this is a LOT of		
			and walked the neighborhood for blocks. I				I am pleased to hear of this project. I hope

There is NO way for water to escape beyond the dead-end of the street. Lots of debris carried down the street that pooled in the front of my home on the street and in yard.	Flooded basements and some drowned cars parked on the street. Stones washed away and the dirt alley flooded Had to remove leaves, branches, trash, etc. The first flood, June 28, 2016 killed all of my landscaped plants along the wall in the backyard. It flooded my patio. It seeped through the ground and flooded the utility room of my basement. The flood on July 24, 2018 caused cracks in my basement		No No No No	Western end of Radcliff. A fence there catches all trash and turns it into a dam, causing overflow into surrounding houses.	I'm aware that the 2900 block of Sherman Street was recently re-graded and re-surfaced. I assume this was done to help with potential future flooding. No flooding, not near water, PLEASE do not make my house in a flood zone. N Y

1036719238	3 4648 S. Acoma St., Englewood, CO		Neighbors basements flooded, debris (couch, trash barrels, fencing) deposited from rushing waters, vehicles flooded, woman tapped and died in home next door	r	Yes	Drainage in alley behind 4648 and 4650 S. Acoma most likely was clogged due to hail and debris	I have pictures on a flip phone but am not able to transfer them.	N	
1036672353	4 3165 S Sherman St. Englewood, CO 80113							N	
1036609616	7 2970 S Ogden St		Basements flooding, yards destroyed, garage property destroyed, etc.			Neighbor at 2980 S Ogden build concrete wall on inside of fence that has displaced a large amount of water onto the surrounding properties. Main drain is also IN our backyard and always fills and floods over giving us the majority of the damage in the neighborhood.		N	
1035878195	5 2860 S. Clarkson Cir., Englewood, 80113		All incidents were of street flooding during and after very severe thunderstorms with hail and high wind or on a warm day after a snow. Even though the curbs are high, street flooding is not uncommon during severe rains and heavy snowmelt. My house is on the corner of S. Clarkson and S. Clarkson Cir. where standing and freezing water is common during snowmelt. I have often had to unclog the gutter along both streets. During these times, people are unable to walk across the street without difficulty.	<u>a</u>	No			N	
1035819424	7 3170 s Franklin St, 80113		Damage cused by serious flooding of homes			My alley has backflow into my garage near the drainage grate		N	
1035688083	1 4300 SO KALAMATH		homes flooded cars trashed		No			N	
			Clogged street storm drains not kept clear by City maintenance caused flooding on all lawns and into homes and apartments behind us and surrounding us.		No		think a good place to start is with those known areas of trouble and S. Sherman St is tagged as one of those. Perhaps i.e. you could tap into the existing storm drainage line with extra storm drains. Another more expensive suggestion would be to consider paving at least certain alleys in an area such as our so that drainage swail would more efficiently direct it down a smooth surface with less debris pulled in and move it to a safer, adequate drainage area.	N
