# Water Meter Upgrades

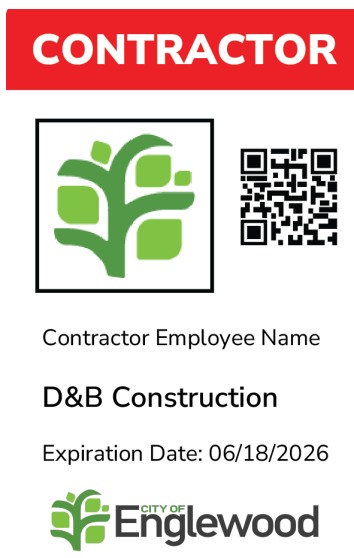

## What to expect

Hello Englewood Utility Customer,

The City of Englewood is upgrading its water metering system to serve you better, starting **June 18, 2024**. We're installing Advanced Metering Infrastructure technology for more accurate billing and monitoring throughout the city. Advanced Metering Infrastructure allows remote data collection to detect leaks and improve service.

You are receiving this letter as your water meter is located outside of your property. **There isn't any action needed from you at this point, but please be aware that there may be a temporary water interruption, and after installation you might notice a slight increase in water usage readings due to improved accuracy.**

**D&B Construction** is the contractor for this project, and their team will be clearly identifiable with uniforms and city badges. D&B Construction has very strict safety protocols and will be knocking on each resident's front door before conducting the water meter change out. Installation technicians will be wearing the badge pictured below to show their association with the City of Englewood.

If you have scheduling questions or problems post installation, please contact D&B Construction at **(303) 900-8602**.

We sincerely appreciate your cooperation as we improve the water metering infrastructure in Englewood. Should you have any questions or concerns regarding this project, please contact the Englewood Utilities Billing Department at **(303) 762-2635** or via email at [ami@englewoodco.gov](mailto:ami@englewoodco.gov).

For further information, resources related to this project are also available on the City of Englewood's website at [englewoodco.gov/watermeter](http://englewoodco.gov/watermeter).
